FEATURES

Bamboo fibres are products of nature and as with all natural products, a slight deviation in texture and colour may occur between dye lots. Where exact colour match is required, please advise our customer service department and we will forward a cutting from actual production for customer approval prior to shipment.

It's important to vacuum the rugs often, in order to clean it and also to recover the pile, which might present some height differences due to high traffic and wear. It's also important that rugs are turned regularly, so that the effects caused by light and normal wear might be equivalent in the whole surface of the rug. When there is furniture placed on the rug exercising pressure, a rug protection can be used so it won't damage the pile and the overall look of the product.

GENERAL CLEANING

Regular cleaning is essential to maintain the appearance of your rug. Use a good vacuum cleaner, which should have 1200W of power and vacuum in the direction of the pile. Bamboo rugs must be cleaned regularly. Naturally, lighter rugs need to be cleaned more often than darker ones. Steam cleaning or any other methods which involve a substantial increase of temperature are not recommended. For Bamboo rugs it is highly recommended a professional injection extraction method washing with low temperatures and low-pressure values. For a deeper cleaning, please use a specialized rug cleaning company.
